What Went Well

Capture learning that can improve similar work elsewhere.

REFERENCE

Capture learning that can improve similar work elsewhere.

REFERENCE

Capture learning that can improve similar work elsewhere.

- ☐ Address immediate safety needs
- ☐ Secure and preserve the scene
- ☐ Document initial conditions
- ☐ Interview separately
- ☐ Collect and organize evidence
- ☐ Build and validate the timeline
- ☐ Analyze barriers and system factors
- ☐ Assign actions and verify effectiveness
- ☐ Share lessons learned

- ☐ Start broad: Tell me what happened
- ☐ Ask what was expected and what changed
- ☐ Avoid leading or blame-focused wording
- ☐ Ask what information was available at the time
- ☐ Clarify sequence, positions, signals, and equipment state
- ☐ Ask what made the work easier or harder
- ☐ End with: What else should I know?

- ☐ Overall scene
- ☐ Equipment positions
- ☐ Damaged components
- ☐ Controls / indicators
- ☐ JSA / permit / procedure
- ☐ Training / qualification records
- ☐ Inspection / maintenance records
- ☐ SCADA / alarm / trend data
- ☐ Measurements and sketches
- ☐ Witness statements

- ☐ Overall orientation
- ☐ Mid-range context
- ☐ Close-up detail
- ☐ Use scale / ruler when useful
- ☐ Capture labels and IDs
- ☐ Photograph before moving items
- ☐ Record direction / viewpoint
- ☐ Avoid relying on digital zoom

- ☐ Control access
- ☐ Photograph before disturbance
- ☐ Record weather and lighting
- ☐ Document equipment state
- ☐ Measure before cleanup
- ☐ Identify witnesses
- ☐ Tag physical evidence
- ☐ Hold relevant components pending release

- ☐ Confirmation bias
- ☐ Hindsight bias
- ☐ Anchoring on first explanation
- ☐ Single-cause thinking
- ☐ Mixing assumptions with facts
- ☐ Overlooking successful controls
- ☐ Corrective actions limited to retraining
- ☐ Failure to verify effectiveness

- ☐ Line of fire
- ☐ Stored energy
- ☐ Pressure release
- ☐ Dropped object
- ☐ Mobile equipment
- ☐ Electrical exposure
- ☐ H2S / toxic gas
- ☐ Fire / explosion
- ☐ Excavation / underground utilities
- ☐ Working at height

- ☐ Record units
- ☐ Establish a fixed reference point
- ☐ Capture height / width / clearance
- ☐ Record equipment orientation
- ☐ Note valve / control positions
- ☐ Use sketches with north arrow
- ☐ Cross-reference photos
- ☐ Verify critical measurements when practical
